| thyoate.        | And Thanks   | and Taste.      |                             |

## The five Aspects of the Planets, with their Chara- cters, and the definition of them.

1. **The Coniunction** is, when two plannets are both in one selfe=signe, and one selfe=degree: which Aspect in Greeke, is called Synodos, and is marked thus ♄.

2 **The Sextile Aspect**, is, when two planets are distant one from another, betweene the centures of their own houses, by a sixt part of the Zodiacke: that is to say, by two whole signes. or 60. degrees, which Aspect is cald in Greeke Exagonos, and is marked thus ✱.

3. **The Quadzile Aspect**, is when two plannets are distant the one from the other three whole signes. or 90 Degrees of the Zodiacke: and is called in Greeke Tetragonos, and is marked thus □.

4. **The**

4. The Trine Aspect, is when two planets are distant the one from the other by foure whole signes, or 120. degrees of the Zodiacke, and is called in Greeke Trigonos, & is marked thus  $\Delta$ .

5. The Opposition, is when two planets are right opposite the one to the other, and are distant the one from the other by six whole signes, or 180. degrees of the Zodiacke, and is called in Greeke Diastetos, marked thus  $\oslash$ .

In the first Columnne of this my Almanacke, toward the right hand, you haue the hour and minute of the Sun-rising, for every day in the year, which houres and minutes, are halfe the length of the same night: for example, the 8. of January, the sunne riseth at 8. a clocke, & no min. which being doubled maketh 16. houres 0 minutes the length of that night. And to knowe the time of the sun-setting, take the houres & minutes found in the Almanacke for sun rising, from 12. and you shall haue the sun-setting lesse: of which being doubled is the length of the day. For example, Jan. the 8. day, the sun riseth at 8. and no min. then take 8. from 12. and there resteth 4. the houre of sun-set that day, 4. being doubled, maketh 8. houres, the length of the 8. day of January, and so of all the rest: Facile factu.

*The Anatomy of mans body, as the parts there-  
of are Heathenishly attributed to the 12.  
Signes of the Zodiaque.*

February the Moone hath 29 day

Ope no veine willingly,  
 Eat no milke wittingly:  
 All fennish Fowle let flye,  
 Use warme Bathes carefully.

May the Moone hath xxx. dayes

Neuer let wrath dwell in thine house,  
 wrath, Reason doth subdue:  
 It breeds sharpe Feuers, and by it,  
 may sodaine death ensue.

August the Moone hath 30 dayes.

Eate and sleepe sparingly,  
 Venus and Cupid defy:  
 Let no blood; Medicines fly,  
 Stay in thine owne Country.

## A Description of the foure Quarters of this yeere, 1621.

**T**his Hyemall Solsticiall or Brimall Quarter, Astro-  
nomicall of this yeere, 1621. according to the com-  
mon doctrine of Astronomy, entered the last yeere,  
1620, the 11. day of December (more naturally about the  
mids of November:) at what time the Sunne entered  
into the first minute of the imaginary signe Capricorne,  
at which time the dayes be at the shortest, and nightes at  
longest. In this time rhumes and moystures doe in-  
crease most, then meates and drinke naturally would bee  
vied very hot, with moderation: also to drinke mode-  
rately wine without alay.

## Of the Spring Quarter.

**T**he tenth day of March, in the morning, our Aequi-  
noxium vernum beginneth, at what time the Sun  
hath his ingresse into the first scruple of the ima-  
ginary signe Aries, at what time dayes and nightes bee  
equall in houres. (The Spring time more naturally and  
truly beginneth about the 8. day of February.) This time  
sweate, fleagme, and blood doe encrease: therefore vse  
meats and drinke, hauing good iuice and sharpe, exercise  
the body diligently. Galen in com. aph. 18. lib. 1. saith,  
Meate would bee eaten lesse in quantity now then in  
winter.

## Allestree. 1621.

winter, and drinke some-what more, but moderately.

### Of Summer Quarter.

**T**he second Solstice or Aestivum of this yeere, called the Aestiuall or Summer Solstice, takes his beginning this yeere, 11. of June, in the afternoone, at what time the declining Sunne is mounted to the highest point of his ascendent, making the longest day and shortest night in all the yeere, (or it beginneth more truly and naturally in May) being then nearest to our Zenith or verticall point, the Sunne having his first ingresse (at this time) into the first minute of the imaginary signe, Cancer. This quarter the inward heate is but little, and the stomacke doth not digest so strongly nor quickly, as in winter: wherefore in this season eating often, and a little at once, is most convenient.

### Of Haruest or Autumne.

**T**he neuer resting Sunne, comming againe to the second Aequinoctiall point, or first scruple of the signe Libra, beginning our Autumnall quarter, or second Spring, making againe the day and night of equall length: it beginneth this yeere the 12. day of September, late in the night, being Wednesday (or more naturally about the midst of August.) This season of the yeere is variable, and the ayre changeable, by nature, by occasion whereof come sundry sicknesses, blood decreaseth, and melancholy aboundeth: wherefore all Summer fruits would then be chewed, forasmuch as they make ill luice, and winds in the body.

*Qui sapit, ille animum fortuna preparat omni,  
Præuisumq; potest arte lenare malum.*

## A Prognostication.

### Of the Eclipses this yeere, 1621.

**F**oure Eclipses shall shew themselves in this yeere, in the two great Lightes of Heauen: that is, two of the Sun, and two of the moone: of which the first of the Sunne and the latter of the Moone, will appeare as hee seeme vpon our Horizon at Derby, (if thicknesse of the aire hinder not) the rest without, as sub terra, & non supra centrum Horoscopi.

The first Eclipse of the Sunne will happen the 11. of May, being Friday next after the Ascension day, according to the Iulian and English account: but the 21. day of May, according to the Gregorian or Roman account. This Eclipse beginning, will appeare with vs at Derby, about 6. a clock and 51. minutes in the morning, the middest at 9. and 51. minutes, and the end at 9. and one minute, 38. seconds: the whole continuance, is 2. houres, both the Luminaries within the first degree of Gemini, nigh Carabibazon, or the Dragons tayle, with this note, that the vpper side of the Sun is obserued to be darkened.

The second Eclipse is of the Moone, the 24. of May, according to the Iulian and English account: but the 3. of June, according to the Gregorian or Roman account. This Eclipse offereth it selfe to the inhabitants towards the west, from vs, and is not to be seene at Derby, because the Moone is not to bee seene vpon our Horizon: it will appeare as hee seeme to them at Mexicana the lesse, and the adiacent Islands, belonging to the vtmost ends of Africa, and Fortunate Isles, which is from vs toward the west, 6. houres and 18. minutes from our Meridian, of which sort is Chaguo in Florida, and places of new Spaine, to the end of Mexicana.

The 3. Eclipse is of the Sunne, hapning the third day of November, according to the Iulian and English account, but the 13. day of the same moneth, according to the Gregorian or Roman accounts: they that dwell at the end Australem Peruanæ, and situate from the Countrey Magellanica, and Islands of Magellanick seas: to these people

## Allostree. 1621.

people shall be scarce very great and fertile, but not  
uncommon.

The fourth Eclipse is of the Moone: it will be seen  
upon our Horizon, the 18. day of November, according  
to our account, but the 14. of the same, according to the  
Roman account, at one of the clock, 20. minutes, upon  
the 2. day after midnight: then shall the Moone be-  
ginne to enter into the shadow of the earth, her body be-  
ginning to be darkned vnder the East side, & upon the low-  
er part, having South declination from the Equitick:  
her greatest obscuration will be at two a clock, and 18.  
minutes after midnight: and then at 3. a clock, and 38.  
minutes, she will be clean out of the shadow of the earth,  
whereby the whole duration from the beginning to the  
ending, will be two houres, 18. minutes, in her greatest  
obscuration in the first face of Gemini, not much past  
Carcabazon, or the Dragons tale.

### Times, or generall rules of Husban- dry, as sowing, planting, gardening, &c. superstitiously attributed to the Moone, in the 12. signes of the Zodiaque.

**A**strologers say, it is good to sow, set, or plant trees,  
when the Moone is in Taurus, Virgo, Capricorne,  
and Pisces.

Good to sow all kinde of Corne, when the Moone is  
in Cancer.

Good to graft or plant, the Moone in Taurus and A-  
quarius, in the increase.

The backe of the head, for the anoynting of balme,  
and also of horses, when the Moone increaseth.

Kill fat Swine in the increase, also the full Moone,  
the Larder better to indure the winter.

## A Prognostication.

Good to fell Timber for building, in the wane, say the auoyding of wormes: but to plash hedges, fell wood to burne, that the stocke may the better grow againe, the Moone increasing.

Good to kill or geld cattell, the Moone increasing, in Aries, Sagittary, or Capricorne.

Remoue and let young trees in the first quarter, the weather being warme and dry, from September vntill February.

Set or sowe all kindes of seedes, the Moone in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquaries, and Pisces: but the seedes, whose rootes be fowth, must be sowne about the full Moone.

Cut vines in the end of January, in February, and in the beginning of March, (and also your hedges.) Dung your Land, that weeds may not abound, in the last quarter.

Gather Apples and fruites in the wane of the Moone, the better to keepe from rotting.

Good for ablactions or weaning of children, let the Moone be in the last quarter, to make them forget the pay or nurse.

Sowe Beanes and Peason about the full Moone: but Lentiles and Fitches in the last quarter.

Good to destroy Cornes, Haye, Mennes, and Clatts, cut them in the last quarter of the Moone, and the in Coniunction, Quartile, or Opposition with Saturne or Mars.

An Unguent or Plaster is best applyed, when the Moone is in the signe which is attributed to the member wherunto it is applyable.

## Rules concerning Physicall Elections.

*Quatuor humores in humano corpore constant,  
Sanguis cum cholera, flegma, melancholiaque,  
Terra melan, aqua fleg, & aer sanguis  
cholera igni.*

The ancient Doct say, that when the weather is extreme hot or cold, it is not good to purge, or to let blood, unless that some great necessity doe require it: and therefore Hippocrat. part. 6. and 46. Aphori sayth, that the Spring and Autumne are more convenient to take Physicke, then Summer or Winter: But in the Spring time open the Liver-veine. because then in Ver time the blood increaseth: and in Autumne, the spleene-veine. because of Melancholy, which then in Autumne increaseth. There be some (more precise then wile) that say, no part of mans body ought to bee touched with any Chyrurgical Instrument, or Cauntry, actual or potential at what time the Astronomer saith, the Sun, Moon, or Minutes of the Ascendent is in the same Imaginary signe. Pleasently attributed to the parts of mans body. And as concerning letting of blood, I say, if it bee for the Pestilence, Plurisie, Phrensie, Equinaxie, a continuall burning Ague, continuall or great head-ach, proceeding of choler, or hot superfluous blood, or for any extreme paine caused by heate or choler, a man (in any of these cases) may not tarry for a chosen day of the Almanacke: because the Patient might dye in the meane space: but incontinently with all speed hee must bee let blood, while he be very weake, and like to dye. This is Galens minde, saying, There is no better medicine for an impostume of fervent inflammation, fevers, and a great ache, then blood letting, in the first & third weekes of the Moone, it is best using externall Evacuations, as Phlebotomy, Batches, Cupping, &c. But in the second and fourth weekes of the Moone, internall Evacuations, because the very spirit and life resteth in the blood, for it is the chiefest humour in mans body: for Sanguis est fundamentum caloris naturalis, in which naturall heate is comforted: therefore it ought not to bee let out, but upon great occasion, and sound advice of some learned Physician; for otherwise it may make a way to many grievous infirmities. Concerning age, young Infants, & decrepit old age, these both are unfit to have Physicke administered unto them, or to be let blood: Now in letting of blood, there be many things to be weighed and considered: therefore I would not wish that any man should

## A Prognostication.

Should trust too much to the vnlarned Chyrurgion.  
 Give any medicine for the warmer a day before and af-  
 ter the new moone. Driake no medicine in the houres  
 of Saturne or Mars, if you can know when they bee, saith  
 Haly Abenn.

The fittest times to take Purgations (as the Astro-  
 logers say) are to bee elected according to the motion of  
 the moone, in watry signes, as in Cancer, Scorpio, and  
 Pisces, Ganin. Chap. 1. Card. 1. Aph. Hermes 74. prop. lasth.  
 Let not the moone bee in signes that cheie the end (in  
 giuing purging medicines) as Aries, Taurus, & Capricorn,  
 or Leo, or wppned to a Planet that is retrograde, for they  
 cause nauieam, and vomit, with the aspect of Saturne,  
 or Mars.

Ptolomic saith also, in the 19. of his Censia, that  
 medicines are not to be ministered when the moone is loy-  
 ned to Iupiter: but best of all to bee ministered when Sol  
 and Venus bono aspectu cum Luna configurati, iuxta:  
 Leovin.

When you would purge any part of mans body, let  
 not that planet which is significant of the part, bee  
 strong, or fortified in the Heauen: for example, purge  
 not the Gall, Mars being fortified. You shall haue the  
 parts of mans body which the planets do signify, set  
 forth for thy knowledge, in the fourth page within my  
 Almanacke.

Take heed to the moone being in Leo, Aries, Taurus,  
 Capricorne.

In 3 in 2 Purge choler is not combnd with  
 aspect of 4 Purge the Pleuraticke  
 4 Purge the Melancholy

The 3 in 2 Purge choler is not combnd with  
 in 2 in 2 Purge Pleuraticke  
 aspect of 4 Purge Melancholy

The 3 in 2 Purge choler is not combnd with  
 in 2 in 2 Purge Pleuraticke  
 aspect of 4 Purge Melancholy

# Allestree. 1621.

In a 12 } 2 Purge choler as before } with a  
 in a 12 } 2 Purge Phlegme } by me-  
 aspect of } 2 Purge Melancholy } dicine.

Good to } Prepare humours, in Gem. Libra, & Aqua.  
 } Purge by Sweating, in Cancer, Libra, & Virg.  
 } Take Sisters in Aries, Libra, & Scorpio.  
 } Take Gargarismes, in Cancer and Aries.  
 } Stop Rhumes & Fluxes, in Tan. Virg. Capr.  
 } Bathe, for cold diseases, in Aries, Leo, Sagit.  
 } Bathe, for hot diseases, in Cancer, Scor. Pisc.

Good to } Attractive } The } v 12 2  
 comfort } Retentive } ( in } v 12 2  
 the vertue } Digestive } } n 12 2  
 } Expulsive } } s 12 2

To enter into Bathes for hot diseases, let the C be in  
 a 12 2. For cold diseases, let the C be under v 12 2.  
 And for cleanness, let the D be in a 12 2, and in a good  
 aspect of 2.

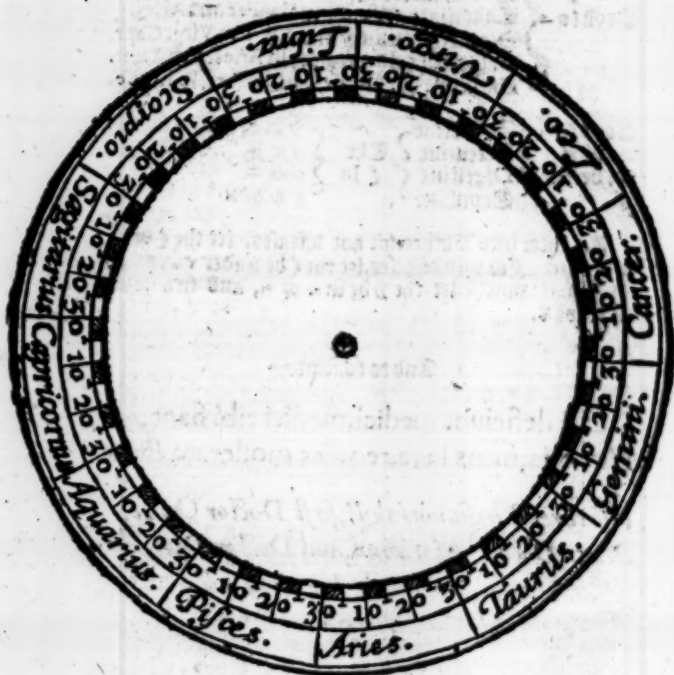

And to conclude,

Si tibi deficiunt medici, medici tibi fiant,  
 Hæc tria, mens laxa, requies, moderata dieta

*Use three Physicians skill, first Doctor Quiet,  
 Next Doctor Meriman, and Doctor Diet.*

## A Prognostication.

A Table composed according to the saying of Ptolomeus in the 60. Aphorisme of his Centiloquium, wherein he saith, The Physician must behold the Moone, as she passeth thorow the Criticall Iudiciall dayes, at what time the Patient first felt his sicknesse, or the question first moued for the sicke:

These are called Criticall dayes of the Physicians, whē the Moone doth abide or rest in degrees which be detrac, either in a Quartile, or in an opposit Aspect (marked in my Almanacke thus, ◯, and thus, ♀,) of the world, from the

the part of the Zodiacke, in which she was in the beginning of the sickness. Nevertheless, the Moone commeth to these beams 02 degrees, now more swift, now more slow, because of her swiftnesse and slownesse in her Age and opposite Age: yea, and for these causes it may well seeme to happen, and that not without reason, that the Crises doe alter their turnes, and are not alwayes the same day and houre, but doe differ in themselves according to the former causes. If the moone be in a Criticall day in her owne house, which is Cancer, 02 her exaltation, which is Taurus, 02 with Jupiter 02 Venus, she indicateth a good Crisis to come: if she apply to Saturne, Mars, 02 the Dragons tayle, they say contrary: likewise, if the moone be in via combusta, which is from the middell of Libra, vntill the middell of Scorpio, 02 vnder the Sunne beams, and decreasing in light 02 motion, the Physicians say, it threatneth death.

The vse of this Table is thus: The day and houre knowne, in which the sicke person tooke his sickness, 02 first question for the sicke, you must search the signe and the degree, 02 the nearest degree that the moone is in, in my Almanacke, which being found, entering it into my precedent Table, where you shall finde the whole Zodiacke diuided into 12. signes and numbers of degrees in the 3. columns immouable, then bring the Apex of the Index, 02 Colnell, (running vpon the Centre 02 middle of the Table, with the Character of the moone.) And, louing Reader, thou hast all thy desire performed before thy face.

An Example.

The 14. day of February, this present yeere 1621. suppose a certaine man fell sicke about noone. (02 a question was made for the sicke then, ) the moone being then in the tenth degree of Aries at noone, (as you shall finde in the 5. column of my Almanacke) before: Now I desire to know the Criticall and Iudiciall dayes, 02 the Crises. Now you must note, that this Table doth represent a moneth of Paragratiō, 02 euery moone in the yeere. Then bring Iritium morbi, with the Character of  
the

## A Prognostication.

the moone, at 11 per of the voluell to the 10. degree of Aries in this Table, and it sheweth you before your eyes, holding it there at the 10. degree of Aries: In the inner column of the Table, pointing you to the 10. degree of Gemini, to which, when the moone cometh, it is a Iudiciall day, which is the 19. of February after, about 6 a clocke in the morning: So likewise, in these dayes the Moone cometh to the 10. degree of Virgo, Sagittary and Pisce: are Iudiciall dayes, which are the 25. of February, the 4. of March, at 9. at night, and the 11. of March, at 6. in the morning: but the 1. 2. 3. and 4. Criticall dayes, of Cries, are, when the moone cometh to the 10. degree of Cancer, Libra, Capricorne and Aries: which shall be the 11. and 27. dayes of February, and the 6. and 13. of March, and so of all other. But remember this, that the will of God is to be looked to in all things.

## The Faïres of the Towne of Darby this yeere, 1621.

The first, April the 5. being Friday in Easter weeke.  
Day the 4. and Day the 25. being Friday in Calist.  
son weeke. June the 19. July 25. and September 26.

Trini-vni Deo gloria.

*God save our gracious King James.*

FINIS.
